```

concoling polypeptides (AAMO1002-AAMO1114), which are essential for the viability of a bacterial cell wall. The acronym CFE stands for "CEG For Expression", where CEG stands for "Conserved Essential Gene". The nucleic acids are useful for detecting the presence of proteins essential for the viability of a bacterial cell wall in samples such as cells, tissues, biological fluids, blood, serum, nose, ear or throat swabs with ligands, and for detecting corresponding target nucleic acid molecules with complementary sequences. The nucleic acids are also useful for determining whether a genomic nucleotide sequence of interest is essential for viability of a bacterial cell or whether it resides within an operon, by integrating an exogeneous nucleotide sequence comprising a portion of an open reading frame of the genomic sequence of interest (comprising 200-500 base pairs) into the genomic sequence of interest viability with a selectable phenotype to the cell, and determining cell viability with a selectable phenotype to the cell, and determining cell viability with gene therapy and antisense therapy. The nucleic acids and proteins are also useful as vaccines and for treating bacterial infections with gene therapy and antisense therapy. The nucleic acids antibiotic resistant bacterial infections.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 3

GENERAL INFORMATION:
APPLICANT: Lynn Doucette-Stamm et àl
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS
TITLE OF INVENTION: EPIDERALIDIS FOR DIAGNOSTICS AND THERAPEUTICS
TITLE REPERBUCE: GTC-007
CURRENT APPLICATION NUMBER: US 60/064,964
PRIOR PILLING DATE: 1999-08-13
PRIOR PILLING DATE: 1997-08-14
PRIOR APPLICATION NUMBER: US 60/055,779
PRIOR PILLING DATE: 1997-08-14

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                        2274
